The digital transformation, the increasing availability of data, the development and use of emerging technologies are changing the way organisations take decisions. The European Commission is undertaking its transformation towards becoming a data-driven organisation relying on data, information and knowledge for policy-making and for its functioning. How information is collected, elaborated and used is at the core of the revamping of the decision-making processes, in particular for top senior managers. This seminar focuses on how information is selected, filtered, channeled and presented to top executives in the European Commission, providing insights on the underlying processes, on the related technical aspects and on the associated data considerations. The outcome of this process is the Executive Cockpit.
